metrologic® group

Graphic & customizable
Report Editor

The inspection report is an essential element for interpreting measurement results, visualizing defects, and ensuring interdepartmental transmission of corrective measures or simply to justify compliance. The X4 integrated report editor serves to quickly create intuitive and graphical inspection and control reports formatted to comply with standards for industry (FTA, FAI, etc.) and trades (gear, blade, etc.), with statistics on paper or electronic media.

Configure a report simply as a function of the industrial standard

Customization of report templates as a function of the standard

Numerous graphical objects are available: Tables, images, graphics, diagrams, …

Drag and drop the elements that you want to analyze

Your report updates itself in detail as you measure

Reports are created automatically

Collaborate and dynamically share your inspection data and work sessions with free X4 i-Viewer

www.metrologic.group

i-Viewer: Collaborate and improve decision-making in the quality process

X4 i-Viewer allows inter-agency consultation of X4 measurement results without requiring a software license, by simply sharing measurement sessions...

i-Viewer specifications:

Allows access via a single click on the graphics view or from the database to the control characteristics: elements, geometric tolerances, color mapping, detailed view, statistics, etc.

The interface is available in 20 languages for engineering project reviews, even between different international sites.
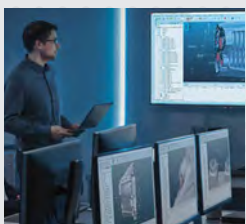

Every measurement can be consulted, an alternative to creating a report.

Easy and simple access to your file on any computer system while your X4 license is used elsewhere.
