

# Training with Metrologic

**Training programs that are adapted to your situation.**

Are you new to metrology? Would you like to hone your skills in a specific area? Metrologic Group offers training courses that can be customized to suit your needs.

Our goal: to ensure you a practical instruction and expertise. We want you to get the most out of Metrologic software.

# Training options:

## Tailored to your needs

Every company has its own constraints and needs. Our customized training courses enable us to teach you about our products as closely as possible to your day-to-day realities, or about more generic subjects such as geometric tolerancing (GD&T).

## With your own parts and measuring equipment

In your workshop, like in our workshop, you can train with your own tools and workpieces. Benefit from a detailed and thorough practical course.

## Practical work and case studies

Our training courses are based on real-life cases, encountered in the world of industry, for up-to-date instruction. Sessions are punctuated by practical work to ensure ongoing validation of what has been learned.

# 90% customer satisfaction rate\*

*\* Ratings are based on a satisfaction survey submitted to 100% of our training participants in 2024.*

## Find your training :

### Training on your site

Unite your team around a shared training program within your lab, creating a powerful, cohesive experience. By learning common methods and language, you can enhance communication and teamwork. In the comfort of your own shop, you can train your staff on your measuring equipment and your own parts, ensuring practical and relevant learning based.

### Training on our site

Achieve greater efficiency through immersive learning in a neutral environment. Enhance your daily practices and operational methods by acquiring new skills and studying real-life cases. Getting away from the pressures of your day-to-day job duties allows you to focus on learning Metrolog from our world-class trainers.

### Online training

Learning over the course of a month through shorter, easy-to-digest sessions benefits most trainees. Furthermore, this approach allows you to introduce different components in separate sessions, providing a broader and more comprehensive exposure to the software.

### Prerequisites for these training courses :

- BASIC PRINT READING SKILLS
- ABILITY TO THINK IN 3D

*La certification qualité a été délivrée au titre de la catégorie d'action suivante : Actions de formation*
